GEOANALYSIS 2012 – A GREAT SUCCESS

Geoanalysis 2012, the flagship meeting of the International Association of Geoanalysts, took place in Búzios, Brazil, on 16–20 September 2012. This was the eighth triennial conference, and it marked the beginning of yet another three-year cycle for our association. This year's gathering was a major success, attracting 167 delegates from 24 countries, making it one of the most successful Geoanalysis meetings yet held. The four days of presentations covered a broad spectrum of topics that are key to achieving reliable results from the analysis of geological and environmental materials. The presentations touched on topics such as the production of the highest-quality reference materials, sampling strategies from the kilometer to the micrometer scale, and advanced strategies for determining “nontraditional” isotope ratios.

The Organizing Committee for Geoanalysis 2012 developed a new format for the conference, eliminating parallel sessions and placing emphasis on poster presentations. The event began with four one-day short courses devoted to a diverse selection of themes that are of core importance in analytical geochemistry. During the subsequent four days, the number of oral presentations was consciously limited, and sessions were focused on a kick-off invited talk that highlighted current key issues for the analyst, thus setting the tone for the given session's theme. Thanks to detailed planning by the conference organizers, the poster sessions were especially well attended, with delegates staying beyond the scheduled times to continue discussion with both poster presenters and corporate sponsors.

As one expects from Geoanalysis conferences, the social aspects of this meeting were also a major highlight. Extended lunch breaks gave delegates excellent opportunities to discuss ongoing research and to plan future collaborations. Despite being at the end of the Brazilian winter, evenings offered the chance for very pleasant gatherings in the old town of Búzios, where many small shops catered to the needs of the visitor and the temperature remained warm throughout the evenings. Wednesday's conference meal was a grand social event; the drumming, dancing, and samba will long be remembered by all.

Efficient organization, an excellent scientific program, and wonderful Brazilian hospitality—exactly what the many delegates from near and far had anticipated!

Membership of the New Governing Council

The Geoanalysis 2012 conference marks the completion of the triennial cycle for the IAG's Governing Council, and with it the handing over of authority to the association's newly selected leadership. At the IAG general meeting, IAG members and other delegates were informed about

The handing over of the IAG leadership at Geoanalysis 2012. Front row, left to right: Matt Horstwood (incoming vice president), Jenny Cook (honorary secretary), Chris Jackson (honorary treasurer), and Thomas Meisel (incoming president). Back row: Michael Wiedenbeck (outgoing president), Doug Miles (founding president of the IAG and IAGeo company secretary), and Phil Potts (outgoing immediate past president)

current initiatives of our association, the success of membership-development efforts, and attempts to inform the wider geoanalytical community about the most modern developments in geoanalysis.

At the end of the general meeting, the results of the recent balloting were announced and were approved by the attending members. The executive members of the Council were then presented to the membership, and delegates were invited to attend the next general meeting: Geoanalysis 9, to be held in 2015 in Loeben, Austria.

Thanks to the Organizing Committee!

The IAG would like to congratulate the Geoanalysis 2012 Organizing Committee for having planned a conference that was scientifically and culturally excellent. Our warmest thanks to Jacinta Enzweiler, chair of the Organizing Committee, and her colleagues for the hard work they all put into making the meeting a thorough success!
