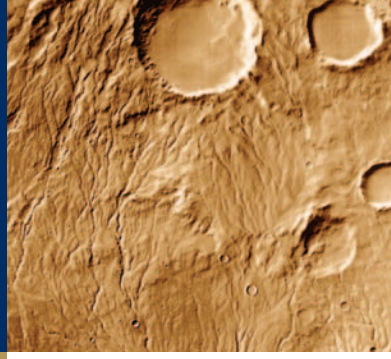
Elements

An International Magazine of Mineralogy, Geochemistry, and Petrology

Volume 2, Number 3 • June 2006



About the cover:
This mosaic of THEMIS daytime infrared images shows the densely dissected region of Warrego Valles, Mars, located near 43° S, 266° E. The dissection was likely caused by some form of water erosion, possibly due to surface runoff during a period of warmer climate or to subsurface runoff associated with the melting of a layer of snow or ice. This image covers an area of ~120 × 160 km at a resolution of 100 m per pixel. Image credit NASA/JPL/Arizona State University

Elements is published jointly by the Mineralogical Society of America, the Mineralogical Society of Great Britain and Ireland, the Mineralogical Association of Canada, the Geochemical Society, The Clay Minerals Society, the European Association for Geochemistry, the International Association of GeoChemistry, and the Société Française de Minéralogie et de Cristallographie. It is provided as a benefit to members of these societies.

Elements is published six times a year. Individuals are encouraged to join any one of the participating societies to receive *Elements*. Institutional subscribers to any of the following journals —*American Mineralogist*, *The Canadian Mineralogist*, *Clays and Clay Minerals*, *Mineralogical Magazine*, and *Clay Minerals*—will also receive *Elements* as part of their 2006 subscription. Institutional subscriptions are available for US$125 a year in 2006. Contact the managing editor (tremblpi@ete.inrs.ca) for information.
