

Elements

An International Magazine of Mineralogy, Geochemistry, and Petrology

Volume 21, Number 6 • December 2025

Cambrian gabbro transformed into banded amphibolite during the Variscan orogeny. The gabbro originally formed during the rifting of the Gondwana megacontinent and the opening of the Rheic Ocean (Žleb, Staré Město Belt, Sudetes, Czechia). OIL ON CANVAS. ADAM KAŠPAR (2020).

Elements is published jointly by the Mineralogical Society of America, Mineralogical Society of the UK and Ireland, Mineralogical Association of Canada, Geochemical Society, The Clay Minerals Society, European Association of Geochemistry, International Association of Geochemistry, Société Française de Minéralogie et de Cristallographie, Association of Applied Geochemists, Deutsche Mineralogische Gesellschaft, Società Italiana di Mineralogia e Petrologia, International Association of Geoanalysts, Polskie Towarzystwo Mineralogiczne (Mineralogical Society of Poland), Sociedad Española de Mineralogía, Swiss Geological Society, Meteoritical Society, Japan Association of Mineralogical Sciences, and International Association on the Genesis of Ore Deposits. The magazine is provided as a benefit to members of these societies.

Elements is published six times a year. Individuals are encouraged to join any one of the participating societies to receive *Elements*. Institutional subscribers to either of the following journals—*American Mineralogist* and *Canadian Journal of Mineralogy and Petrology*—also receive one copy of *Elements* as part of their subscription. Institutional subscriptions are available for US\$190 (US\$205 non-US addresses) per year in 2025. Contact the Executive Editor (editor@elementsmagazine.org) for information.

 **GeoScienceWorld**
Participating Publisher

The Variscan Orogeny in Europe – Understanding Supercontinent Formation

Guest Editors: **Urs Schaltegger**, **Karel Schulmann**, and **Jose R. Martínez Catalán**

387

Variscan Orogeny: A Three Oceans Problem

Karel Schulmann, José R. Martínez Catalán, and Urs Schaltegger

394

Modeling the Variscan Orogeny

Taras Gerya and Petra Maierová

401

Extent and Role of Cratonic Lithosphere in the Variscan Orogeny

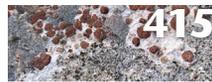

Stanislaw Mazur, Stephen Collett, Imma Palomeras, Christian Schiffer, and Olivier Vanderhaeghe

408

Evolution and Structure of the European Variscan Lithospheric Mantle

Lukáš Ackerman, L. Gordon Medaris, Jr., Andréa Tommasi, and Alain Vauchez

415

Granites and the Nature of the Variscan Crust

Jean-François Moyen, Alexandra Guy, Patrizia Fiannacca, Vojtěch Janoušek, Carlos Villaseca, and Puy Ayarza Arribas

422

Assembling Pangaea – The Complex Morphology of the Laurussia – Gondwana Collision

J. Brendan Murphy, R. Damian Nance, Karel Schulmann, Yvette D. Kuiper, and José R. Martínez Catalán
